

Assembly Version Descriptions

Version: 1.1.0.80
Release Date: 8.15.2016

Major Features and Updates:

Security Roles

- Defined actions secured by roles
- Many code updates to support role-based security

Bug Fix: Restore Times

- All UTC times from Multispeak methods are converted to local time

Form Validation

- Users will see “friendly” messages directly on the form when fields are not filled in properly before submitting

Waiting Outages

- Color coded on the Calls and Outages screen
- Can be assigned to a crew from the Outages screen or from the Crews screen
- Bug Fix: Waiting Outages are no longer in Dispatched status, but remain Open until assigned a Crew

Page Auto Refresh

- Improvements made to only refresh after time lapses since last mouse movement or key press
- Refresh interval is now configurable per customer

Code Deployment Enhancements

- Customer-specific settings are stored within the application configuration to eliminate custom code changes with each deployment
- Many code updates to implement these settings in various code areas

Version: 1.1.0.102
Release Date: 10.06.2016

Major Features and Updates:

Poll Meters

- Meter attributes added to screen
- Message added to indicate when no response received from AMI

Predictions

- Rows highlight yellow and indicate Assigned Outage

Bug Fix: Restore Outage

- Fix Crew updates on Calls during Restore Outage

Code Enhancements

- Added horizontal scroll on table views
